Experience

C6 Bank

Tech Engineer Specialist

São Paulo

2024–present

Tech Engineer Specialist in the Artificial Intelligence team, leading the Android development of C6 Assistant, an AI-based assistant launched to 35 million customers in December 2024. The solution became one of the main entry points for questions, support, and banking operations within the mobile app.

- Android development of C6 Assistant;
- Solution launched to 35M customers;
- Development of an AI-based conversational interface.

C6 Bank

Senior Mobile Developer

São Paulo

2020–2024

Senior engineer in the Experience and Platform team, developing mobile + backend integrations for features such as login, app home, investments, and user profile. Contributed to the Design System by building reusable and customizable components, and worked on permissioning services that control access to banking features.

- Evolution of home, login, investments, and profile flows;
- Development of reusable components in the Design System;
- Implementation of product permissioning services;
- Development of the bank self-service kiosk project.

Cubos

Team Leader and Mobile Developer

Salvador

2018–2020

Team Leader in the BBNK project, a product that enables companies to offer banking services to their customers.

Cubos Academy

Android Instructor

Salvador

2018–2019

Focused on training developers from different stacks (backend, frontend, hybrid mobile, QA, etc.) to build native Android applications using software design and coding best practices.

Space Rocket

Co-founder

Salvador

2016–2020

Space Rocket aimed to accelerate businesses through technology by developing custom digital solutions for companies. During this period, I contributed to building the company while also working on the projects DizzinessApp, Data and Nutrition, and Constante.

Detailed Achievements:

- Winner of the Inova+Saúde competition with the Dizziness app;
- Winner of Campus Future with the Dizziness app.

Center for Computer Architecture and Operating Systems

Researcher

Bahia - Brazil

2016–2018

Researched on the Very Small Size Soccer and the RoboCup Simulation 3D League, focusing on the strategic development of the team, such as creation of behaviors and analysis of patterns.

Awards:

- Latin American Champion at 3D Simulation League 2017 (Curitiba - Brazil);
- Second Place at 3D Simulation League at the RoboCup Symposium 2017 (Nagoya - Japan);
- Sixth Place at RoboCup 2017 Competition for 3D Simulation (Nagoya - Japan).

Education

Bahia State University

Bachelor of Information Systems,

Bahia - Brazil

2016–2020

Languages

Portuguese: Fluent (mother tongue)

English: Fluent

Mobile: Kotlin, Java, Android SDK, Jetpack Compose, Navigation Component, Android UI / Animations, SQLite, Room, MVVM, Clean Architecture, MVP, Modular Architecture, Mobile Architecture, Dependency Injection, Unit Testing, CI/CD, Git

Geral: REST APIs, Backend Integration, Design Systems, Reusable UI Components, UI Customization, AI-powered Features, Conversational Interfaces, AI Assistant Development, Fintech, Digital Banking, Self-service Kiosk / Totem Systems, Agile Methodologies

Personal Portfolio

- **Tiker App:** 2020 – 2022

Tiker was a sticker organizer for WhatsApp. It was created to assist search and creation of sticker packages for WhatsApp, allowing users to share packages with friends.

- **Constante:** 2019 – 2020

Constante is an application that allows users to create and maintain new habits. It allows users to start creating common habits, from drinking water to creating fully customizable and varied habits. The main objective of the project is to change people's lives by maintaining good habits.

- **Dizziness:** 2017 – 2018

Dizziness App is an Android application that allows people diagnosed with labyrinthitis disease to have treatment through the app, be accompanied by a doctor and see their progress.

- **CittiCard:** 2017 – 2018

CittiCard is a collaborative app, where the users of Salvador Card self-service stations (metro and bus tickets), can check if the system is running, working properly and locate the nearest spot.

- **Turim Lab:** 2015 – 2017

The Turim Lab was a computational blog aiming to teach operational systems, programming languages and some tips about information security.
